

# Scrum Bot

## Chat bot

---

Before everything you'll need to open your telegram application and looking for the bot in order to start the talk with the scrum bot called **hackathoniwqybot**, so immediately the bot going to run the **/start** command, here we going to configurate all the initial environment for the bot.

## Using Commamnds

---

In the chat you'll have a commands serie to do certain actions to interact with the bot like **/start** command, so here we have the commands available:

- **/setup:**  
This command allow you set all the configuration about how the bot interacts with the integrations.
- **/update\_board:**  
This command allow you update the trello board related by github issues.
- **/help:**  
This command allow you see an explanation how is this.

## Cron

---

The bot has a cron job that update the board each minute (as example) you can setup this too through the commands.

## Sponsors

---

I would like to give thanks to **Ideaware** and **Qrvey** for this opportunity to have this moment of professional growth, and thanks for everything.
